

## TAPER PLUG VALVES

---

This catalogue covers all standard straightway in the Taper Plug design to the ANSI pressure class 125 - 150 - 250 and 300.

To identify the correct type of valve, please use the code on the following page, by means of which the valve figure number is specified in the shape of letters and figures.

When sending inquiries or orders to the supplier/representatives, it is important to state the exact details of the service (working conditions). Therefore, in addition to the identification number, quantity and size, please state the following information:

- Nature of service
- Range of temperature
- Normal working pressure
- Type of flanges (raised face/ring joint or other)
- Dimension of pipe (only when valves have butt or socket welding ends)
- Accessories, if any.

For information on valve types not covered by this catalog, please contact our sole agent/representative in your country.
